

# Scaling Deep into the Future of Analytics

## Advanced Certificate in **Applied Artificial Intelligence & Deep Learning**

**Batch 03**

7 months

Starts 19<sup>th</sup> September, 2026

Live online lectures

# Interdependence of Deep Learning and Big Data in Today's World

Ever wondered how companies like Amazon and Netflix personalise product recommendations to user experiences? Or how Tesla is making advancements in self-driving cars? Or how smart cities enhance city management? They all leverage on Applied Artificial Intelligence & Deep Learning to analyse millions of data points like user behaviour, purchase history, social media, or data from the Internet of Things, from sensors, cameras, radars, etc., to offer enhanced user experiences or improve overall city management.

Human-to-machine interfaces have significantly evolved over the years. Traditional tools like the mouse and keyboard are replaced by more intuitive interactions such as gestures, swipes, touch, and speech, each of which leaves behind huge amount of unlabelled or uncategorised data. This large-scale data or big data can significantly benefit from DL due to its capability to process and extract insights from vast amounts of unstructured data.

**The impact of deep learning is significant – and it's only getting started.** Analytical improvements, advances in cloud computing, new Machine Learning (ML) approaches, and new classes of neural networks are driving DL opportunities and applications.

## Business Applications of Applied Artificial Intelligence & Deep Learning

### RETAIL

Using customer data, retailers can predict their needs and preferences and cut down on needless stock, ultimately staying a step ahead of customer expectations.

### BANKING

Banks identify patterns in unstructured data and improve enterprise-wide decision-making. In risk management, banks can set lending limits and detect and prevent financial frauds.

### HEALTHCARE

DL offers better patient care, healthcare records, and operational efficiency. It also helps analyse medical images and identify tumours and their progression.

### MANUFACTURING

It helps improve overall quality and is instrumental in reducing downtime of crucial resources and equipment, thereby saving money, improve efficiency, product quality and employee safety.

### LOGISTICS

The precision and speed of DL helps increase productivity, efficient operations, schedule repairs with predictive maintenance, monitor and track vehicles in real time, and reduce operating costs.

### GOVERNMENT

Land, water, and traffic management, maintenance of infrastructure, fraud detection, etc., which were too challenging problems for the government to address earlier are now solved with ease using DL.

# Why is it Important to Harness the Power of Applied Artificial Intelligence & Deep Learning

Applied Artificial Intelligence & Deep Learning is crucial in today's data-driven world for several reasons:

## Impact Across Multiple Industries

From healthcare to finance, DL and analytics are transforming industries by enabling predictive modelling, data-driven decision-making, enhancing customer experiences, innovating at a faster pace, and optimising and streamlining operations. Companies that harness these gain a significant competitive edge.

## Drives Innovation and Efficiency

Areas like healthcare, finance, logistics, and manufacturing can leverage advanced tools and techniques to automate processes, improve decision-making, and foster innovation to optimise operations and reduce costs.

## Enhances Problem-Solving Skills and Decision-making

Analysing complex data and building DL models equips professionals with advanced problem-solving skills that enable you to tackle real-world challenges, making you an essential contributor to your organisation. It also enhances strategic decision-making, helping businesses anticipate market trends and make informed choices that drive growth.

## Rising Demand and Emerging Career Opportunities

Fields like artificial intelligence, machine learning, and data science are among the fastest-growing sectors, offering numerous career paths with high-paying and intellectually stimulating roles. Organisations across industries are actively seeking individuals who can analyse and derive insights from large datasets.

## Future-proofs Your Career

As AI and machine learning continue to evolve, the need for up-to-date skills becomes even more critical. Upskilling ensures that your expertise remains relevant, protecting your career from the risks of automation and making you adaptable to future technological advancements.

*Upskilling in Applied Artificial Intelligence & Deep Learning is not just a career enhancer—it's a strategic investment in your future. It equips you with cutting-edge skills that are increasingly indispensable, enabling you to stay relevant, lead innovation, and drive impactful results in a data-centric world. A certification and expertise in AAI & DL distinguish you as a forward-thinking leader in your field.*

# Career Opportunities

Below are the job roles you can explore in this field:

## Data Scientist

Lead the development of data-driven solutions by analysing large datasets, building models, and deriving actionable insights to solve complex business problems. Data Scientists collaborate with cross-functional teams to implement strategies that drive business success.

## Machine Learning Engineer

Develop and deploy machine learning models that automate processes and solve business challenges. Machine Learning Engineers focus on creating scalable algorithms and integrating models into production environments for real-time use.

## Data Analyst

Collects, cleans, and analyses data to identify trends and patterns, providing actionable insights to support business operations and decisions.

## AI/ML Research Scientist

AI/ML research scientists help pave the way for advancements in AI that impact various aspects of our lives. As AI continues to reshape industries they continue to research and implement new algorithms, models, and systems.

## Business Intelligence Analyst

A business intelligence analyst, also known as a BI analyst, uses data and other information to help organisations make sound business decisions.

## Data Engineer

Design, build, and maintain scalable data pipelines that ensure smooth data flow between systems. Data Engineers work on optimising data storage and retrieval systems, enabling efficient access for analysts and scientists to use in their projects.

## Deep Learning Engineer

Designs, trains, and optimises neural networks to create and refine complex models.

## Quantitative Analyst

Quantitative analysts are the creators of computer algorithms that assist with 21st century markets through electronic trading from numerical algorithms. Quantitative analysts program algorithms that are speedy and efficient enough to help locate the finest trades for the best price ahead of competitors.

## Data Architect

A data architect is an IT professional responsible for defining the policies, procedures, models and technologies used in collecting, organising, storing, and accessing company information.

## Big Data Engineer

A big data engineer is a professional who is responsible for developing, maintaining, testing, analysing, and evaluating a company's data.

## Product Analyst/Manager

A product analyst gathers and analyses data from various sources to extract actionable insights, use statistical techniques and data visualisation to interpret trends and patterns and identify opportunities for product improvements based on data analysis.

## Data Science Consultant

Analyses and interprets complex data sets to extract insights and guide business decisions using statistical methods, machine learning, and programming.

# About the Programme

A thorough grasp of data analytics and cutting-edge deep learning techniques is what the **"Advanced Certificate in Applied Artificial Intelligence & Deep Learning" (Batch 03), by IITM Pravartak, Technology Innovation Hub of IIT Madras** aims to impart in its participants. Students will become proficient in machine learning algorithms, use fundamental statistical techniques, and manipulate and analyse data in Python. The programme emphasises practical experience with tools such as PyTorch and TensorFlow, and incorporates MLOps, and cybersecurity concepts through practical instruction and case studies, learners will gain the necessary skills to handle real-world data challenges effectively.

## Key Features

- Certification from the prestigious IITM Pravartak , A technology innovation hub by IIT MADRAS
- Comprehensive curriculum covering latest tools, techniques, and algorithms
- Hands-on experience with deep learning frameworks
- Online live classes will be conducted by faculty from IIT Madras, other IITs, IIMs, and industry experts
- A balanced pedagogy of theory, practice, webinars, and projects
- One-day campus immersion module at IIT Madras Research Park
- Tailored career guidance provided by TimesPro

# Learning Outcomes

- Analyse complex data problems, propose solutions, and draw meaningful conclusions.
- Apply statistical methods and linear algebra in data analysis to derive meaningful insights from data.
- Build and evaluate machine learning models for various tasks such as regression, classification, and clustering.
- Develop deep learning models using frameworks like TensorFlow and PyTorch, and implement techniques such as CNNs, transfer learning, and object detection.

## Who Should Attend?

- Fresh Graduates with a bent of mind for analytics and AI
- Experienced professionals who are keen to gain knowledge of the new-age technologies and enhance their proficiency in analytics and DL tools to further their careers
- Professionals who want to reap the benefits of applying DL and analytics to solve the problems faced in their job/organisation and drive growth

## Eligibility

Graduation or Post Graduation in Engineering, Mathematical, and Computational Sciences\*

*\*Min 50% is required in the graduation*

# In-depth Curriculum

## Module 1: Python Foundations for Data-Driven Insights

- Fundamentals of Python for data analysis
- Working with core libraries (NumPy, Pandas, Matplotlib)
- Setting up efficient workflows for data science

### Learning Outcomes:

Master Python programming; Manipulate data using core libraries; Build foundational analysis and visualization skills

## Module 2: Applied Probability and Statistics for Decision Making

- Understanding statistical thinking in data science
- Applying probability models to real-world datasets
- Drawing insights from descriptive and inferential analyses

### Learning Outcomes:

Apply statistical models to data; Infer relationships and trends; Make quantitative decisions using probability

## Module 3: Cleaning and Visualizing Data Like a Pro

- Preparing datasets for analytics
- Building meaningful visualizations
- Using charts for storytelling

### Learning Outcomes:

Clean and prepare raw datasets; Develop effective data visualizations; Communicate insights clearly

## Module 4: Building Predictive Models with Machine Learning

- Understanding end-to-end ML workflows
- Applying supervised and unsupervised learning
- Engineering features for model optimization

### Learning Outcomes:

Design and train ML models; Apply predictive analytics; Assess model performance accurately

### **Module 5: Foundations of Neural Networks and Deep Learning**

- Understanding multi-layer neural networks
- Implementing models using deep learning frameworks
- Grasping optimization and training concepts

#### **Learning Outcomes:**

Build and train deep neural networks; Tune parameters for optimal performance; Apply DL frameworks

### **Module 6: Deep Learning Models & Applications**

- Understanding architectures of DL applications
- Implementing models in vision and text domains
- Applying transfer learning for efficiency

#### **Learning Outcomes:**

Apply DL to CV and NLP tasks; Deploy AI models across domains; Compare architectures and performance

### **Module 7: Scaling AI Operations: MLOps & LLMOps**

- Understanding MLOps lifecycle
- Automating deployment and versioning
- Managing production ML/AI systems

#### **Learning Outcomes:**

Develop automated ML pipelines; Manage model life cycles; Understand LLMOps for generative models

### **Module 8: AI in Action: Real-World Innovation**

- Exploring domain-specific AI use cases
- Understanding emerging technologies shaping industries
- Leveraging AWS and Causal AI in applied projects

#### **Learning Outcomes:**

Analyze industry AI trends; Evaluate generative and causal AI applications; Design domain-specific AI solutions

### **Module 9: Understanding the Core of Agentic AI Systems**

- Tracing the conceptual evolution of agentic systems
- Differentiating static and autonomous AI agents
- Establishing foundational understanding of Agentic AI models

#### **Learning Outcomes:**

Explain the foundations of Agentic AI, Historical Development of Agentic AI;  
Identify use cases of adaptive agents

### **Module 10: Architectures and Technologies of Agentic Systems**

- Deconstructing multi-agent systems
- Understanding underlying AI agent architectures
- Exploring core technologies behind autonomous reasoning

#### **Learning Outcomes:**

Build mental models of agent architecture; Implement simple multi-agent flows; Analyze emerging agent technologies

### **Module 11: Agentic AI Governance**

- Understanding governance principles for agentic AI
- Monitoring agent performance and ethical behavior
- Preparing for emerging regulatory and operational trends

#### **Learning Outcomes:**

Establish governance frameworks for AI agents; Measure and optimize performance; Apply ethical principles in agent design

## Industry-ruling Tools Covered

Data Science and ML: MLOps, LLMOps, PCA, Autoencoders, and more

## Assignments

- Assignment Topic 1: Data Visualisation
- Assignment Topic 2: Statistics
- Assignment Topic 3: Linear Algebra
- Assignment Topic 4: ML Algorithms
- Assignment Topic 5: Deep Learning
- Case Studies: ML Algorithms, Deep Learning
- Capstone Projects: Times Series/NLP

# Shaping a World of Infinite Possibilities with Generative AI

Certificate Program in  
Advanced LLM Development  
in Generative AI

**Worth ₹9999,**  
EXCLUSIVE FREE ACCESS  
with this Program

## Course Overview

The Certificate Program in Advanced LLM Development in Generative AI equips learners with hands-on experience in building Generative AI-powered applications. Participants will dive into tools like LangChain, Open AI, Hugging Face, and Amazon BedRock to develop chatbots, RAG architectures, and generative models. This course offers deep insights into LLM parameters, prompt engineering, and advanced model fine-tuning, ideal for those looking to master Generative AI development.

## Key Highlights

12 hours of Learning

Mastery of LangChain  
and Open AI tools

Real-world applications  
across multiple sectors

LLM fine-tuning and  
advanced techniques

Project-based learning  
experience

Led by industry experts

## Modules

1. Introduction to LangChain & Open AI LLMs
2. Building ChatBot using Open AI
3. Open source model using hugging face
4. Building RAG Architecture using Langchain and Open AI
5. Introduction to generative models using Amazon BedRock
6. Understanding LLM model parameter
7. Introduction to Prompt engineering
8. Understanding Zero shot, Single shot and Few shot with Langchain
9. Google Gemini generative model implementation
10. Connecting Langchain and Amazon BedRock
11. Building ChatBot using Langchain, BedRock and Streamlit
12. Building Company Policy Q&A chatBot using LangChain, BedRock & Streamlit
13. Fine-Tuning LLMs using Hugging Face

Disclaimer: The Certificate Program in Advanced LLM Development in Generative AI is offered by TimesPro. IIT M Pravartak is not responsible for the same. Certificate for the same will be issued by TimesPro upon successful completion of IIT M Pravartak's Advanced Certificate in Applied Artificial Intelligence & Deep Learning

# Career Support

|                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

## Access to Selected Job Opportunities through:

- Curated job opportunities from leading job boards on the TimesPro job portal
- Job openings from TimesPro hiring partners

**Note:** Career support facility is offered by TimesPro. IITM Pravartak is not responsible for the same.

# Past Participants Profile

## Top Industries

- Automotive
- Banking/Mortgage
- Computer Software
- Customer Service
- Education
- Electrical Manufacturing
- Healthcare
- Information Technology
- Marketing/Advertising/Sales
- Research and Development

## Work Experience

# Past Participants Profile

## Top Grades

- Chief Technology Officer
- Vice President
- Director
- General Manager
- Senior Manager
- Sr. Solution Architect
- Senior Staff Engineer
- Manager - Projects
- Technical Lead

## Our Past Participants hail from

# Programme Details at a Glance

## Delivery

Online Direct-to-Direct (D2D) Mode

## Pedagogy

The programme uses a balanced pedagogy of online lectures, hands-on practice, assignments, case studies, webinars, and projects.

- Theory - 40%
- Practical - 60%

## Schedule

Sessions will be held on two alternate weekends per month:

Morning: 10:00 AM – 12:30 PM

Afternoon: 02:00 PM – 04:00 PM

## Duration

7 Months

- 84 Hours Instructor-led Online Training
  - 74 Hours Theory + Hands-on
  - 10 Hours Webinar
- 1 month Capstone Project of which 8 hours online assistance will be offered by training leads

## Campus Immersion

There will be an optional one-day campus immersion at IIT Madras Research Park at the end of the programme for interaction between faculty and learners.

*\*Note- The cost of campus immersion is to be borne by the learner.*

## Admission Criteria

- Selection will be based on application review and approval by faculty.
- Participants with some exposure to high school mathematics and knowledge of programming basics are preferred

## Evaluation

- 40% - End of programme MCQ-based exam
- 50% - Assignments and project
- 10% - Attendance
- Candidates need to secure minimum 50% overall to be eligible for the certificate

# The Coveted Credentials

Candidates who score at least 50% marks overall and have a minimum attendance of 50%, will receive a 'Certificate of Completion' from IITM Pravartak, the Technology Innovation Hub of IIT Madras.

*Disclaimer: All certificate images are for illustrative purposes only and may be subject to change at the discretion of IIT Madras.*

## Faculty Profiles

### **Prof. Babji Srinivasan**

Associate Professor, Applied Mechanics, IIT Madras

Prof. Babji Srinivasan received his B.Tech degree in instrumentation and control engineering from Madras Institute of Technology, Chennai, India. In 2008, he received the Master's degree in chemical engineering from the Indian Institute of Technology Madras, Chennai, India. He then started his doctoral work at the department of chemical engineering at Texas Tech University Lubbock, TX, USA and received his doctorate in 2011. In 2012, he joined the Indian Institute of Technology Gandhinagar, India as an Assistant Professor at the departments of chemical and electrical engineering. In 2020, Prof. Babji joined the Indian Institute of Technology Madras as an Associate Professor in the department of applied mechanics, IITM. His research interests include cognitive systems engineering, behavioural informatics and human cyber-physical systems.

### **Dr. Neelesh S Upadhye**

Assistant Professor, Department of Mathematics, IIT Madras

Dr. Neelesh Shankar Upadhye is an Assistant Professor at the Department of Mathematics, Indian Institute of Technology, Madras. He obtained his Masters and Doctoral degree in Mathematics from the Indian Institute of Technology Bombay. The major areas of his research interest span across Probabilistic Approximations, Compound Poisson and Compound negative binomial Approximations, Distribution Theory, Negative binomial perturbations and Poisson perturbations, Market Microstructure, Fractals and Data Science. Prior to being a faculty member of IIT Madras, he was a Quantitative Researcher at Dolat Investments Ltd., Mumbai. Dr. Neelesh has co-authored nearly 20 publications based on Probability and Statistics.

## Faculty Profiles

### Dr Ranganathan Srinivasan

Adjunct Professor, IIT Madras

Dr. Ranganathan Srinivasan holds a Ph.D. in chemical engineering from Clarkson University, USA, and is currently an adjunct professor at IIT Madras. He has more than 25 years of experience at Honeywell in various roles and is a Lead Consultant at present. His work experience includes the application of machine learning towards productization in the following domains: industrial, building, and supply chain. He is an avid researcher and has been granted 15 US patents, 10 trade secrets, and has an academic citation of over 825. He has been credited with enabling the business of over USD 50 million. His interest in teaching and research was kindled during his MTech at IIT Bombay in 1998 and he has since worked closely with academia.

### Dr. P Satya Jayadev

Principal Data Scientist at Gyan Data  
Guest Faculty at IIT Madras  
Data Science Teaching Expert at GITAA

Dr. Jayadev did his B. Tech in Electrical and Electronics Engineering from Gayatri Vidya Parishad College of Engineering, Vizag. He did his Masters and PhD from IIT Madras and specializes in the areas of data science, optimization and control engineering. During his PhD, Jayadev was affiliated with the Robert Bosch Center for Data Science & AI, and Systems. He is now working as a Principal Data Scientist in Gyan Data Pvt. Ltd. Jayadev's research interests include modelling, analysis, optimization, and control of systems, applying tools of machine learning, reinforcement learning and deep learning. His works have been published in multiple international conferences and peer reviewed journals. Jayadev played an active role in content development and tutoring for multiple courses offered by his PhD Guide (Dr. Ramkrishna Pasumarthy) through the NPTEL platform of Govt. of India. He is also a guest faculty for the postgraduate program in Industrial AI at IIT Madras.

## Faculty Profiles

### **Prof. Pankaj Dutta**

Shailesh Mehta Chair Professor, Decision Sciences and Operations Research, IIT Bombay

Prof. Pankaj Dutta is Professor in Decision Sciences and Operations Research at School of Management, Indian Institute of Technology (IIT) Bombay, Mumbai, India. He holds a PhD degree from IIT Kharagpur, India, and a Postdoctoral Fellow from EPFL, Swiss Federal Institute of Technology, Switzerland. He has worked as an INSA Fellow at Karlsruhe Institute of Technology, Germany, and DAAD Visiting Professor at Humboldt University of Berlin, Germany. He served as an associate editor of OPSEARCH and Guest Editor, editorial board member and reviewer of several international journals. He is the Central Council Member of the Operational Research Society of India (ORSI). He has received several merit/best paper awards and research grants and is also a member of ORSI, ISDSI and PMI, India. His current areas of research interest include applied operations research, business analytics, supply chain management, e-commerce, and reverse logistics. He has several publications in international journals like European Journal of Operational Research, Annals of Operations Research, Transportation Research Part E: Logistics and Review, International Journal of Production Research, Journal of Cleaner Production, IEEE Transactions on Engineering Management, International Journal of Information Management, International Transactions in Operational Research, Information Systems Frontiers, Computers & Industrial Engineering and International Journal of Systems Science among others.

### **Mr. Suresh Ramadurai**

Data Science Consultant

Mr. Suresh's expertise is in the area of data sciences. In a career spanning over twenty-five years, he has helped organizations develop profitable brands and businesses using research and analytics. He has worked in the areas of advertising, market research and analytics with JWT, TNS India, and IBM Daksh. He has been teaching market research as a visiting faculty at various IIM's, and is also involved in training analytics professionals. Suresh graduated from IIT New Delhi with a degree in Chemical Engineering in 1984 and completed his post-graduate diploma in management from IIM Bangalore in 1988.

# Programme Fee

| Particulars     | Amount (in ₹)* |
|-----------------|----------------|
| Application Fee | 1,000          |
| Programme Fee   | 1,65,000       |
| GST@18%         | 29,700         |
| Total Fee       | 1,94,700       |

- *\*Discount for learners on upfront full fee payment: Within 5 days of receiving the admission offer letter or before the programme start date – ₹9,000*
- *\*\*Please note: All fees paid are non-refundable once the Programme has commenced.*
- *\*\*\*Application Fees are non-refundable*

## Payment Schedule

| Instalment       | Particulars                                                                                 | Amount (in ₹)* |
|------------------|---------------------------------------------------------------------------------------------|----------------|
| Application Fee  | To be paid at the time of registration                                                      | 1,000          |
| Installment- I   | Within 05 days of the offer letter or before the start of the program, whichever is earlier | 55,000 + GST   |
| Installment- II  | Within 45 days of the programme start                                                       | 55,000 + GST   |
| Installment- III | Within 90 days of the programme start                                                       | 55,000 + GST   |

\*GST will be additional as applicable.

## Timelines

|                      |                                      |

## About IITM Pravartak

IITM Pravartak Technologies Foundation is a section 08 company housing the Technology Innovation Hub on Sensors, Networking, Actuators, and Control Systems (SNACS). We are hosted by the Indian Institute of Technology, Madras and funded by the Department of Science and Technology, Government of India, under its National Mission on Interdisciplinary Cyber-Physical Systems.

Established in 2013, we are the award-winning H.EdTech initiative of the Times Group, catering to the learning needs of Indians with aspirations of career growth. We offer a variety of created and curated learning programmes across a range of categories, industries, and age groups. They include employment-oriented Early Career courses across BFSI, e-Commerce, and technology sectors; Executive Education for working professionals in collaboration with premier national and global educational institutions; and Enterprise Solutions for learning and development interventions at the organisational level. TimesPro strives to embody the values of Education 4.0: Learner-centric, industry-relevant, role-specific, and technology-enabled, with a goal of making learning accessible for anyone who seeks to grow.

Industry relevant curriculum  
by best-in-class faculty

Interactive sessions with  
state-of-art LMS

IIMs and IITs as course partners

1,00,000+ alumni community
